# Foresight™ Carrier Screen

#### ABOUT THIS TEST

The **Counsyl Foresight Carrier Screen** utilizes sequencing, maximizing coverage across all DNA regions tested, to help you learn about your chance to have a child with a genetic disease.

#### **RESULTS SUMMARY**

Risk Details	DONOR 10320	Partner
Panel Information	Foresight Carrier Screen Universal Panel ACOG/ACMG/DMD Panel Fundamental Panel (175 conditions tested)	N/A
POSITIVE: CARRIER Alpha Thalassemia	<b>⊕ CARRIER</b> *  chr16:g.(?_226678)_(227520_?)del  (aka -alpha3.7) heterozygote	Reproductive risk can be more accurately assessed after carrier screening of the partner. Carrier testing should be considered. See "Next Steps".
Reproductive Risk: Not Calculated Inheritance: Autosomal Recessive	Alpha globin status: -a/aa.	

<sup>\*</sup>Carriers generally do not experience symptoms.

No disease-causing mutations were detected in any other gene tested. A complete list of all conditions tested can be found on page 7.

#### CLINICAL NOTES

None

#### NEXT STEPS

- Carrier testing should be considered for the diseases specified above for the patient's partner, as both parents must be carriers before a child is at high risk of developing the disease.
- Genetic counseling is recommended and patients may wish to discuss any positive results with blood relatives, as there is an increased chance that they are also carriers.

#### REPRODUCTIVE RISK SUMMARY

Reproductive risk can be more accurately assessed after carrier screening of the partner. Genetic counseling is recommended to review results and risks in further detail.

### What is Alpha Thalassemia?

Alpha thalassemia is a blood disorder that affects hemoglobin, a major component of red blood cells that carries oxygen in the body. Hemoglobin is a protein complex made up of two different chains. There are many forms of hemoglobin, but the primary type is made up of alpha chains and beta chains. Alpha thalassemia is caused by mutations involving the genes, *HBA1* and *HBA2*, that code for the alpha chains.

Most individuals have two functional pairs or four functional copies of the alpha globin genes (one copy each of *HBA1* and *HBA2* on both chromosomes).

Carriers generally have either two or three functional alpha globin genes and do not have any symptoms.

FEMALE N/A

- Three functional alpha globin genes, silent carrier: These individuals are typically known as silent carriers, because they do not have any symptoms or abnormalities on a complete blood count. This status results from the presence of an alpha+ mutation (mutation that eliminates the function/presence of one copy of an alpha globin gene).
- Two functional alpha globin genes, carrier: These carriers generally have mild anemia characterized by hypochromic (pale) and microcytic (small) red blood cells, which can be measured on a complete blood count. However, they usually do not have any symptoms of the disease (note exception below). Carrier status may result from the presence of two alpha+ mutations (eliminates function/presence of one copy of an alpha globin gene on each chromosome) or an alpha0 mutation (eliminates function/presence of both copies of the alpha globin genes on one chromosome).

Exception: There have been reports of individuals with two copies of certain types of point mutations who have a diagnosis of hemoglobin H disease with variable symptoms. One example of this is when individuals have two copies of the hemoglobin Constant Spring mutation, which is common in the Southeast Asian population.

Disease symptoms most typically occur if an individual has one or zero functional alpha globin genes.

- One functional alpha globin gene, hemoglobin H disease: This form of alpha thalassemia is very variable. Disease severity ranges from asymptomatic to moderate microcytic/hypochromic anemia with the possibility of jaundice (yellowing of the skin or eyes), enlarged spleen, bone deformities, fatigue, and other minor complications.
- Zero functional alpha globin genes, hemoglobin Bart syndrome: Individuals who have no functional copies or are missing all four copies of the associated genes almost always have this fatal form of alpha thalassemia. Hb Bart syndrome is generally associated with death *in utero* due to the buildup of excess fluid in the body and tissues (hydrops fetalis). Signs and symptoms in the newborn period can include severe anemia, hepatosplenomegaly (enlarged liver and spleen), and birth defects of the heart, urinary system, and genitalia. Most babies with this condition are stillborn or die soon after birth.

#### How common is Alpha Thalassemia?

The carrier frequency and incidence of alpha thalassemia vary by the type and population. Carrier frequency of this condition is reported to be the highest in individuals of Southeast Asian, African, West Indian, and Mediterranean descent. In 2010, the estimated number of worldwide annual births of patients with Hb H disease was 9,568 and with Hb Bart syndrome was 5,183. Therefore, the worldwide birth prevalence of Hb H disease and Hb Bart's hydrops is estimated at ~1/14500 and ~1/27000, respectively; however, for Hb Bart's hydrops, this is likely to be an underestimate because most at-risk couples are not currently identified.

## How is Alpha Thalassemia treated?

Alpha thalassemia carrier status does not necessitate treatment. Treatment for hemoglobin H disease varies based on the severity of the symptoms. For many individuals, blood transfusions are given during crises, which are episodic and usually precipitated by environmental stressors, like oxidant medications or fever. Individuals with more severe symptoms may require regular blood transfusions, folic acid supplementation, prophylactic antibiotics, iron chelation therapy (removal of excess iron from the body), and possible hemoglobin F-enhancing agents and splenectomy.

Extremely rare cases of survivors with hemoglobin Bart syndrome have been reported when fetal blood transfusions were given, followed by regular treatments similar to those who have hemoglobin H disease. Treatments or surgical correction of potential birth defects may also be available. However, there is a high risk for intellectual and physical disability in these rare survivors. These individuals may be candidates for hematopoietic stem cell transplantation.

#### What is the prognosis for a person with Alpha Thalassemia?

Because hemoglobin H disease can be variable, prognosis ultimately depends on the severity of the disease. Mild disease may be manageable with little effect on daily life. However, more severe disease will necessitate frequent and regular therapy, and may be associated with a shortened lifespan. Untreated, the prognosis is poor with a shortened lifespan of up to age 5 years. However, when treated, individuals with hemoglobin H disease have a lifespan that approaches normal.

Hemoglobin Bart syndrome is the most severe clinical condition related to alpha thalassemia, and death may occur *in utero* or in the newborn period. Of note, there may also be maternal complications during pregnancy if the fetus has hemoglobin Bart syndrome. These complications include preeclampsia (high blood pressure, fluid build-up/swelling, protein in the urine), polyhydramnios (excessive amniotic fluid) or oligohydramnios (reduced amniotic fluid), hemorrhage, and premature delivery.

## Methods and Limitations

DONOR 10320 [Foresight Carrier Screen]: Sequencing with copy number analysis, spinal muscular atrophy, and analysis of homologous regions.

#### Sequencing with copy number analysis

High-throughput sequencing and read depth-based copy number analysis are used to analyze the listed exons, as well as selected intergenic and intronic regions, of the genes in the Conditions Tested section of the report. The region of interest (ROI) of the test comprises these regions, in addition to the 20 intronic bases flanking each exon. In a minority of cases where genomic features (e.g., long homopolymers) compromise calling fidelity, the affected intronic bases are not included in the ROI. The ROI is sequenced to high coverage and the sequences are compared to standards and references of normal variation. More than 99% of all bases in the ROI are sequenced at greater than the minimum read depth. Mutations may not be detected in areas of lower sequence coverage. Small insertions and deletions may not be as accurately determined as single nucleotide variants. Genes that have closely related pseudogenes may be addressed by a different method. CFTR and DMD testing includes analysis for both large (exon-level) deletions and duplications with an average sensitivity of 99%, while other genes are only analyzed for large deletions with a sensitivity of >75%. However, the sensitivity may be higher for selected founder deletions. If GIB2 is tested, two large upstream deletions which overlap G/B6 and affect the expression of G/B2, del(G/B6-D13S1830) and del(G/B6-D13S1854), are also analyzed. Mosaicism or somatic variants present at low levels may not be detected. If detected, these may not be reported.

Detection rates are determined by using literature to estimate the fraction of disease alleles, weighted by frequency, that the methodology is unable to detect. Detection rates only account for analytical sensitivity and certain variants that have been previously described in the literature may not be reported if there is insufficient evidence for pathogenicity. Detection rates do not account for the disease-specific rates of de novo mutations.

All variants that are a recognized cause of the disease will be reported. In addition, variants that have not previously been established as a recognized cause of disease may be identified. In these cases, only variants classified as "likely" pathogenic are reported. Likely pathogenic variants are described elsewhere in the report as "likely to have a negative impact on gene function". Likely pathogenic variants are evaluated and classified by assessing the nature of the variant and reviewing reports of allele frequencies in cases and controls, functional studies, variant annotation and effect prediction, and segregation studies. Exon level duplications are assumed to be in tandem and are classified according to their predicted effect on the reading frame. Benign variants, variants of uncertain significance, and variants not directly associated with the intended disease phenotype are not reported. Curation summaries of reported variants are available upon request.

## Spinal muscular atrophy

Targeted copy number analysis is used to determine the copy number of exon 7 of the SMN1 gene relative to other genes. Other mutations may interfere with this analysis. Some individuals with two copies of SMN1 are carriers with two SMN1 genes on one chromosome and a SMN1 deletion on the other chromosome. This is more likely in individuals who have 2 copies of the SMN1 gene and are positive for the g.27134T>G SNP, which affects the reported residual risk; Ashkenazi Jewish or Asian patients with this genotype have a high post-test likelihood of being carriers for SMA and are reported as carriers. The g.27134T>G SNP is only reported in individuals who have 2 copies of SMN1.

## Analysis of homologous regions

A combination of high-throughput sequencing, read depth-based copy number analysis, and targeted genotyping is used to determine the number of functional gene copies and/or the presence of selected loss of function mutations in certain genes that have homology to other regions. The precise breakpoints of large deletions in these genes cannot be determined, but are estimated from copy number analysis. High numbers of pseudogene copies may interfere with this analysis.

If CYP21A2 is tested, patients who have one or more additional copies of the CYP21A2 gene and a loss of function mutation may not actually be a carrier of 21-hydroxylase-deficient congenital adrenal hyperplasia (CAH). Because the true incidence of non-classic CAH is unknown, the residual carrier and reproductive risk numbers on the report are only based on published incidences for classic CAH. However, the published prevalence of non-classic CAH is highest in individuals of Ashkenazi Jewish, Hispanic, Italian, and Yugoslav descent. Therefore, the residual and reproductive risks are likely an underestimate of overall chances for 21-hydroxylase-deficient CAH, especially in the aforementioned populations, as they do not account for non-classic CAH. If HBA1/HBA2 are tested, some individuals with four alpha globin genes may be carriers, with three genes on one chromosome and a deletion on the other chromosome. This and similar, but rare, carrier states, where complementary changes exist in both the gene and a pseudogene, may not be detected by the assay.

#### Limitations

In an unknown number of cases, nearby genetic variants may interfere with mutation detection. Other possible sources of diagnostic error include sample mix-up, trace contamination, bone marrow transplantation, blood transfusions and technical errors. This test is designed to detect and report germline alterations. While somatic variants present at low levels may be detected, these may not be reported. If more than one variant is detected in a gene, additional studies may be necessary to determine if those variants lie on the same chromosome or different chromosomes. The test does not fully address all inherited forms of intellectual disability, birth defects and genetic disease. A family history of any of these conditions may warrant additional evaluation. Furthermore, not all mutations will be identified in the genes analyzed and additional testing may be beneficial for some patients. For example, individuals of African, Southeast Asian, and Mediterranean ancestry are at increased risk for being carriers for hemoglobinopathies, which can be identified by CBC and hemoglobin electrophoresis or HPLC (ACOG Practice Bulletin No. 78. Obstet. Gynecol. 2007;109:229-37).

This test was developed and its performance characteristics determined by Myriad Women's Health, Inc. It has not been cleared or approved by the US Food and Drug Administration (FDA). The FDA does not require this test to go through premarket review. This test is used for clinical purposes. It should not be regarded as investigational or for research. This laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) as qualified to perform high-complexity clinical testing. These results are adjunctive to the ordering physician's evaluation. CLIA Number: #05D1102604.

Gaucher Disease - Gene: GBA. Autosomal Recessive. Analysis of homologous regions. Variants (10): D409V, D448H, IVS2+1G>A, L444P, N370S, R463C, R463H, R496H, V394L, p.L29Afs\*18. Detection Rate: Mixed or Other Caucasian 60%

GJB2-related DFNB1 Nonsyndromic Hearing Loss and Deafness - Gene: GJB2. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_004004:1-2. Detection Rate: Mixed or Other Caucasian >99%.

GLB1-related Disorders - Gene: GLB1. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000404:1-16. Detection Rate: Mixed or Other Caucasian >99%.

GLDC-related Glycine Encephalopathy - Gene: GLDC. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000170:1-25. Detection Rate: Mixed or Other Caucasian 94%.

Glutaric Acidemia Type 1 - Gene: GCDH. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000159:2-12. Detection Rate: Mixed or Other

Glycogen Storage Disease Type Ia - Gene: G6PC. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000151:1-5. Detection Rate: Mixed or Other Caucasian >99%

Glycogen Storage Disease Type Ib - Gene: SLC37A4. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_001164277:3-11. Detection Rate: Mixed or Other Caucasian >99%

Glycogen Storage Disease Type III - Gene: AGL. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000642:2-34. Detection Rate: Mixed or Other Caucasian >99%.

GNPTAB-related Disorders - Gene: GNPTAB. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_024312:1-21. Detection Rate: Mixed or Other Caucasian >99%.

**GRACILE Syndrome** - **Gene**: BCS1L. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_004328:3-9. Detection Rate: Mixed or Other Caucasian >99%.

HADHA-related Disorders - Gene: HADHA. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000182:1-20. Detection Rate: Mixed or Other Caucasian >99%.

Hb Beta Chain-related Hemoglobinopathy (Including Beta Thalassemia and Sickle Cell Disease) - Gene: HBB. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000518:1-3. Detection Rate: Mixed or Other Caucasian >99%.

Hereditary Fructose Intolerance - Gene: ALDOB. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000035:2-9. Detection Rate: Mixed or Other Caucasian >99%.

Herlitz Junctional Epidermolysis Bullosa, LAMA3-related - Gene: LAMA3. Autosomal Recessive. Sequencing with copy number analysis. Exons:

NM\_000227:1-38. Detection Rate: Mixed or Other Caucasian >99%. Herlitz Junctional Epidermolysis Bullosa, LAMB3-related - Gene: LAMB3. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000228:2-23. Detection Rate: Mixed or Other Caucasian >99%.

Herlitz Junctional Epidermolysis Bullosa, LAMC2-related - Gene: LAMC2. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_005562:1-23. Detection Rate: Mixed or Other Caucasian >99%.

Hexosaminidase A Deficiency (Including Tay-Sachs Disease) - Gene: HEXA. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000520:1-14. Detection Rate: Mixed or Other Caucasian >99%.

HMG-CoA Lyase Deficiency - Gene: HMGCL. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000191:1-9. Detection Rate: Mixed or Other Caucasian 98%.

Holocarboxylase Synthetase Deficiency - Gene: HLCS. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000411:4-12. Detection Rate: Mixed or Other Caucasian >99%.

Homocystinuria Caused by Cystathionine Beta-synthase Deficiency - Gene: CBS. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000071:3-17. Detection Rate: Mixed or Other Caucasian >99%.

Hydrolethalus Syndrome - Gene: HYLS1. Autosomal Recessive. Sequencing with copy number analysis. Exon: NM\_001134793:3. Detection Rate: Mixed or Other

Hypophosphatasia, Autosomal Recessive - Gene: ALPL. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000478:2-12. Detection Rate: Mixed or Other Caucasian >99%.

Inclusion Body Myopathy 2 - Gene: GNE. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_001128227:1-12. Detection Rate: Mixed or Other Caucasian >99%

Isovaleric Acidemia - Gene: IVD. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_002225:1-12. Detection Rate: Mixed or Other Caucasian >99%.

Joubert Syndrome 2 - Gene: TMEM216. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_001173990:1-5. Detection Rate: Mixed or Other Caucasian >99%

**KCNJ11-related Familial Hyperinsulinism** - **Gene**: KCNJ11. Autosomal Recessive. Sequencing with copy number analysis. **Exon**: NM\_000525:1. **Detection Rate**: Mixed or Other Caucasian >99%.

Krabbe Disease - Gene: GALC. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000153:1-17. Detection Rate: Mixed or Other Caucasian >99%. LAMA2-related Muscular Dystrophy - Gene: LAMA2. Autosomal Recessive.

Sequencing with copy number analysis. **Exons:** NM\_000426:1-65. **Detection Rate:** Mixed or Other Caucasian >99%.

**Leigh Syndrome, French-Canadian Type** - **Gene**: LRPPRC. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_133259:1-38. **Detection Rate**: Mixed or Other Caucasian >99%.

**Lipoamide Dehydrogenase Deficiency** - **Gene**: DLD. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000108:1-14. **Detection Rate**: Mixed or Other Caucasian >99%.

**Lipoid Congenital Adrenal Hyperplasia** - Gene: STAR. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_000349:1-7. **Detection Rate:** Mixed or Other Caucasian >99%.

**Lysosomal Acid Lipase Deficiency - Gene:** LIPA. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_000235:2-10. **Detection Rate:** Mixed or Other Caucasian >99%.

**Maple Syrup Urine Disease Type 1B** - **Gene:** BCKDHB. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_183050:1-10. **Detection Rate:** Mixed or Other Caucasian >99%.

**Maple Syrup Urine Disease Type Ia** - **Gene:** BCKDHA. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_000709:1-9. **Detection Rate:** Mixed or Other Caucasian >99%.

**Maple Syrup Urine Disease Type II - Gene**: DBT. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_001918:1-11. **Detection Rate**: Mixed or Other Caucasian 96%.

Medium Chain Acyl-CoA Dehydrogenase Deficiency - Gene: ACADM. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000016:1-12. Detection Rate: Mixed or Other Caucasian >99%.

**Megalencephalic Leukoencephalopathy with Subcortical Cysts** - **Gene:** MLC1. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_015166:2-12. **Detection Rate:** Mixed or Other Caucasian >99%.

**Metachromatic Leukodystrophy** - **Gene**: ARSA. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000487:1-8. **Detection Rate**: Mixed or Other Caucasian >99%.

**Methylmalonic Acidemia, cblA Type** - **Gene**: MMAA. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_172250:2-7. **Detection Rate**: Mixed or Other Caucasian >99%.

Methylmalonic Acidemia, cblB Type - Gene: MMAB. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_052845:1-9. Detection Rate: Mixed or Other Caucasian >99%.

**Methylmalonic Aciduria and Homocystinuria, cblC Type** - **Gene**: MMACHC. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_015506:1-4. **Detection Rate**: Mixed or Other Caucasian >99%.

**MKS1-related Disorders** - **Gene**: MKS1. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_017777:1-18. **Detection Rate**: Mixed or Other Caucasian >99%.

**Mucolipidosis III Gamma** - **Gene:** GNPTG. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_032520:1-11. **Detection Rate:** Mixed or Other Caucasian >99%.

**Mucolipidosis IV** - **Gene:** MCOLN1. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_020533:1-14. **Detection Rate:** Mixed or Other Caucasian >99%

**Mucopolysaccharidosis Type I** - **Gene**: IDUA. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000203:1-14. **Detection Rate**: Mixed or Other Caucasian >99%.

**Mucopolysaccharidosis Type II - Gene:** IDS. X-linked Recessive. Sequencing with copy number analysis. **Exons:** NM\_000202:1-9. **Detection Rate:** Mixed or Other

**Mucopolysaccharidosis Type IIIA - Gene**: SGSH. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000199:1-8. **Detection Rate**: Mixed or Other Caucasian >99%.

**Mucopolysaccharidosis Type IIIB** - **Gene**: NAGLU. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000263:1-6. **Detection Rate**: Mixed or Other Caucasian >99%.

**Mucopolysaccharidosis Type IIIC** - Gene: HGSNAT. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_152419:1-18. **Detection Rate:** Mixed or Other Caucasian >99%.

**Muscle-eye-brain Disease** - **Gene:** POMGNT1. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_017739:2-22. **Detection Rate:** Mixed or Other Caucasian 96%.

**MUT-related Methylmalonic Acidemia** - **Gene**: MUT. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000255:2-13. **Detection Rate**: Mixed or Other Caucasian >99%.

MYO7A-related Disorders - Gene: MYO7A. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000260:2-49. Detection Rate: Mixed or Other Caucasian >99%.

**NEB-related Nemaline Myopathy** - **Gene:** NEB. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_001271208:3-80,117-183. **Detection Rate:** Mixed or Other Caucasian 92%.

**Nephrotic Syndrome, NPHS2-related** - **Gene:** NPHS2. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_014625:1-8. **Detection Rate:** Mixed or Other Caucasian >99%.

**Niemann-Pick Disease Type C - Gene**: NPC1. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000271:1-25. **Detection Rate**: Mixed or Other Caucasian >99%.

**Niemann-Pick Disease Type C2** - **Gene:** NPC2. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_006432:1-5. **Detection Rate:** Mixed or Other Caucasian >99%.

Niemann-Pick Disease, SMPD1-associated - Gene: SMPD1. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000543:1-6. Detection Rate: Mixed or Other Caucasian >99%.

**Nijmegen Breakage Syndrome** - **Gene:** NBN. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_002485:1-16. **Detection Rate:** Mixed or Other Caucasian >99%.

**Northern Epilepsy** - **Gene:** CLN8. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_018941:2-3. **Detection Rate:** Mixed or Other Caucasian >99%.

**Ornithine Transcarbamylase Deficiency - Gene**: OTC. X-linked Recessive. Sequencing with copy number analysis. **Exons**: NM\_000531:1-10. **Detection Rate**: Mixed or Other Caucasian 97%.

**PCCA-related Propionic Acidemia - Gene:** PCCA. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_000282:1-24. **Detection Rate:** Mixed or Other Caucasian 95%.

PCCB-related Propionic Acidemia - Gene: PCCB. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_001178014:1-16. Detection Rate: Mixed or Other Caucasian >99%.

**PCDH15-related Disorders** - **Gene**: PCDH15. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_033056:2-33. **Detection Rate**: Mixed or Other Caucasian 93%.

**Pendred Syndrome** - **Gene:** SLC26A4. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_000441:2-21. **Detection Rate:** Mixed or Other Caucasian >99%.

**Peroxisome Biogenesis Disorder Type 3** - **Gene**: PEX12. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000286:1-3. **Detection Rate**: Mixed or Other Caucasian >99%.

**Peroxisome Biogenesis Disorder Type 4 - Gene**: PEX6. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000287:1-17. **Detection Rate**: Mixed or Other Caucasian 97%.

**Peroxisome Biogenesis Disorder Type 5 - Gene**: PEX2. Autosomal Recessive. Sequencing with copy number analysis. **Exon**: NM\_000318:4. **Detection Rate**: Mixed or Other Caucasian >99%.

**Peroxisome Biogenesis Disorder Type 6** - **Gene**: PEX10. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_153818:1-6. **Detection Rate**: Mixed or Other Caucasian >99%.

**PEX1-related Zellweger Syndrome Spectrum - Gene:** PEX1. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_000466:1-24. **Detection Rate:** Mixed or Other Caucasian >99%.

**Phenylalanine Hydroxylase Deficiency** - **Gene:** PAH. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_000277:1-13. **Detection Rate:** Mixed or Other Caucasian >99%.

PKHD1-related Autosomal Recessive Polycystic Kidney Disease - Gene: PKHD1. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_138694:2-67. Detection Rate: Mixed or Other Caucasian >99%.

**Salla Disease** - **Gene**: SLC17A5. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_012434:1-11. **Detection Rate**: Mixed or Other Caucasian 98%. **Sandhoff Disease** - **Gene**: HEXB. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000521:1-14. **Detection Rate**: Mixed or Other Caucasian >99%.

Segawa Syndrome - Gene: TH. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000360:1-13. Detection Rate: Mixed or Other Caucasian >99%. Short Chain Acyl-CoA Dehydrogenase Deficiency - Gene: ACADS. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000017:1-10. Detection Rate: Mixed or Other Caucasian >99%.

**Sjogren-Larsson Syndrome** - **Gene**: ALDH3A2. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000382:1-10. **Detection Rate**: Mixed or Other Caucasian 97%.

**Smith-Lemli-Opitz Syndrome** - **Gene:** DHCR7. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_001360:3-9. **Detection Rate:** Mixed or Other Caucasian >99%.

**Spastic Paraplegia Type 15** - **Gene**: ZFYVE26. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_015346:2-42. **Detection Rate**: Mixed or Other Caucasian >99%.

**Spinal Muscular Atrophy** - **Gene**: SMN1. Autosomal Recessive. Spinal muscular atrophy. **Variant** (1): SMN1 copy number. **Detection Rate**: Mixed or Other Caucasian 95%.

**Spondylothoracic Dysostosis** - **Gene**: MESP2. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_001039958:1-2. **Detection Rate**: Mixed or Other Caucasian >99%.

**Sulfate Transporter-related Osteochondrodysplasia** - **Gene**: SLC26A2. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000112:2-3. **Detection Rate**: Mixed or Other Caucasian >99%.

**TGM1-related Autosomal Recessive Congenital Ichthyosis** - **Gene**: TGM1. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000359:2-15. **Detection Rate**: Mixed or Other Caucasian >99%.

**TPP1-related Neuronal Ceroid Lipofuscinosis - Gene**: TPP1. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000391:1-13. **Detection Rate**: Mixed or Other Caucasian >99%.

Tyrosinemia Type I - Gene: FAH. Autosomal Recessive. Sequencing with copy number analysis. Exons: NM\_000137:1-14. Detection Rate: Mixed or Other Caucasian >99%.

**Tyrosinemia Type II** - **Gene:** TAT. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_000353:2-12. **Detection Rate:** Mixed or Other Caucasian >99%.

**USH1C-related Disorders** - **Gene**: USH1C. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_153676:1-27. **Detection Rate**: Mixed or Other Caucasian >99%.

**USH2A-related Disorders** - **Gene**: USH2A. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_206933:2-72. **Detection Rate**: Mixed or Other Caucasian 94%.

**Usher Syndrome Type 3** - **Gene:** CLRN1. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_174878:1-3. **Detection Rate:** Mixed or Other Caucasian >99%.

**Very Long Chain Acyl-CoA Dehydrogenase Deficiency** - **Gene**: ACADVL. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000018:1-20. **Detection Rate**: Mixed or Other Caucasian >99%.

**Wilson Disease** - **Gene**: ATP7B. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000053:1-21. **Detection Rate**: Mixed or Other Caucasian >99%. **X-linked Adrenoleukodystrophy** - **Gene**: ABCD1. X-linked Recessive. Sequencing with copy number analysis. **Exons**: NM\_000033:1-6. **Detection Rate**: Mixed or Other Caucasian 77%.

**X-linked Alport Syndrome** - **Gene:** COL4A5. X-linked Recessive. Sequencing with copy number analysis. **Exons:** NM\_000495:1-51. **Detection Rate:** Mixed or Other Caucasian 95%.

X-linked Congenital Adrenal Hypoplasia - Gene: NR0B1. X-linked Recessive. Sequencing with copy number analysis. Exons: NM\_000475:1-2. Detection Rate: Mixed or Other Caucasian 99%.

X-linked Juvenile Retinoschisis - Gene: RS1. X-linked Recessive. Sequencing with copy number analysis. Exons: NM\_000330:1-6. Detection Rate: Mixed or Other Caucasian 98%.

X-linked Myotubular Myopathy - Gene: MTM1. X-linked Recessive. Sequencing with copy number analysis. Exons: NM\_000252:2-15. Detection Rate: Mixed or Other Caucasian 98%.

X-linked Severe Combined Immunodeficiency - Gene: IL2RG. X-linked Recessive. Sequencing with copy number analysis. Exons: NM\_000206:1-8. Detection Rate: Mixed or Other Caucasian >99%.

**Xeroderma Pigmentosum Group A** - **Gene**: XPA. Autosomal Recessive. Sequencing with copy number analysis. **Exons**: NM\_000380:1-6. **Detection Rate**: Mixed or Other Caucasian >99%.

**Xeroderma Pigmentosum Group C** - **Gene:** XPC. Autosomal Recessive. Sequencing with copy number analysis. **Exons:** NM\_004628:1-16. **Detection Rate:** Mixed or Other Caucasian 97%.

## Risk Calculations

Below are the risk calculations for all conditions tested. Since negative results do not completely rule out the possibility of being a carrier, the **residual risk** represents the patient's post-test likelihood of being a carrier and the **reproductive risk** represents the likelihood the patient's future children could inherit each disease. These risks are inherent to all carrier screening tests, may vary by ethnicity, are predicated on a negative family history and are present even after a negative test result. Inaccurate reporting of ethnicity may cause errors in risk calculation. The reproductive risk presented is based on a hypothetical pairing with a partner of the same ethnic group.

†Indicates a positive result. See the full clinical report for interpretation and details.

Disease	DONOR 10320 Residual Risk	Reproductive Risk
1-beta-hydroxylase-deficient Congenital Adrenal Hyperplasia	1 in 3,800	< 1 in 1,000,000
